DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-3 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Fassett (4509055).

Regarding Claims 1-3 and 20, Fassett shows in Figures 2,3B and 4, for example, a method of forming a plurality of two-way radiation beams using a transmit and receive system and such a system 13, comprising controlling a transmit antenna array to provide a plurality of beams, controlling a switched beam combining circuit of a receive array to sense a plurality of receive beams and combining predetermined ones of a plurality of transmit beams and receive beams to form the two-way beams, all arranged as claimed. The arrays of elements are shown in Fig. 3B, where Fig. 2 shows each TX and RX system for an individual pair of antenna elements in the array. As to Claims 2 and 3, the beam switching system comprises the switches 31 for both polarizations.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Application/Control Number: 10/619,020 Page 3

Art Unit: 2828

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- 4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 5. Claims 4-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fassett (4509055).

Regarding Claims 4-19, Fassett teaches the use of combining many beams, transmit and receive beams employing the circuitry in Fig. 2 and Fig. 3B. A skilled artisan would have found it obvious to employ any number, as claimed herein, of transmit and receive beams, selecting the respective beams formed in transmit and receive combinations, because the beams are independently controllable by the circuitry disclosed therein. Figure 4 of Fassett shows how the signals are combined in order to combine the respective beams as desired, in order to provide the radiation patterns in a particular system. In this case, sum and difference patterns are produced.

Application/Control Number: 10/619,020 Page 4

Art Unit: 2828

6. The patent to Smith (5202700) is cited as of interest illustrating a TX/RX system

capable of producing respective beams within the aperture in order to form a radar

phased array.

7. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Michael C. Wimer whose telephone number is (571)

272-1833. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Minsun O. Harvey can be reached on (571) 272-1835. The fax phone

number for the organization where this application or proceeding is assigned is 703-

872-9306.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
